

DOES YOUR REEL OFFER TOTAL CONTROL?

Okuma is one of the best-known names in reels and regularly unveils innovations that make its products better. The latest is its TCA (Torsion Control Armor) technology. What does it mean?

Anglers know that a fishing reel is only as good as its parts so Taiwanese manufacturer Okuma – which knows a thing or two about the subject having been making tackle including popular reels since 1986 – continues to design concepts and produce technology that helps improve these vital tools even further.

DOMINATE WITH POWER

Okuma's TCA (Torsion Control Armor) offers maximum protection against the twists and turns which happen during casting and fighting fish, that can potentially weaken the body of a reel.

The one-piece TCA design was built using Okuma C-40X carbon fibre technology and manufactured with a double arm design. Compared to traditional single side designs, TCA's double arm is said to offer higher torsion and flex resistance under heavy pressure for improved strength. This not

only makes the reel lighter but also extremely rigid, ensuring the internal parts stay in perfect alignment.

RESISTANCE UNDER PRESSURE

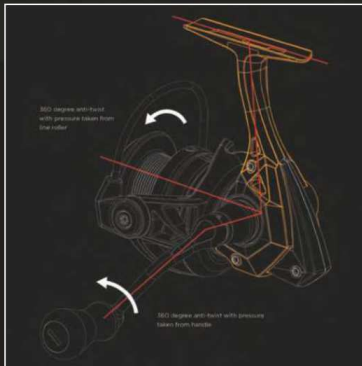

Pulling line through the roller and during retrieval increases pressure on your reel's body, creating numerous wear spots.

Okuma has tackled this issue thanks to its double arm TCA, which is understood to provide torsion resistance that is 25 per cent stronger than a traditional design.

STRENGTHENS AGAINST WEAK POINTS

While traditional spinning body designs utilised a single-side support, Torsion Control Armor uses a durable double-arm design to help decrease pressure on weak areas and body twisting points.

Okuma's Epixor XT spinning reel – the next generation of reels that are lightweight, tough and provide exceptional 'feel' – is just one of the products that

is made using TCA technology.

As a result, it provides anglers with a stronger, more durable design that will leave them feeling satisfied with each and every catch while ensuring the longevity and durability of the reel.

For more than three decades,

the Okuma brand of tackle has been the first choice for discerning anglers for both fresh and saltwater fishing and these latest innovations seem set on continuing this legacy.
